

## SecurePIM Government SDS

# Secure Mobile Productivity Solution for Smartphones and Tablets

Government-grade protection for classified data

SecurePIM Government SDS enables government employees to work remotely, any time from any location, while complying with high security and data protection standards. SecurePIM Government SDS is the only security solution approved by the German Federal Office for Information Security (BSI) to allow the processing and transfer of information classified as "restricted" ("Verschlussache – nur für den Dienstgebrauch" – VS-NfD) on iOS and Android devices ("Allgemeine Freigabeempfehlung" for Android).

### Government-grade Security

SecurePIM Government SDS is a system solution developed with BSI's high security requirements and enables government employees to work remotely using a smartphone or tablet. All data is securely synchronized with local network servers via central access to the Berlin-Bonn (IVBB/NdB) or comparable specific networks. In combination with its smartcard solution, SecurePIM Government SDS is the only certified solution to allow the processing and transfer of information classified as "restricted" (VS-NfD) on iOS and Android devices.

### Powerful Productivity and Access from Anywhere

SecurePIM Government SDS provides public sector employees with access to classified data, through tools like email, voice, contacts, calendars, notes, tasks, documents and a protected camera. Additionally, users can access intranet sites and web applications while on the go. Further features include document reading, editing and sharing. With these features, government employees can use smartphones and tablets to access classified data from any location and even work offline.

SecurePIM Government SDS allows encrypted calls directly from contact directory (optional feature, additional app required).

### BENEFITS FOR EMPLOYEES

- + Secure access to classified data using smartphones and tablets
- + Intuitive and easy to use
- + Encrypted calls supported directly from the app
- + Management of up to six email accounts
- + Edit documents online or offline
- + Touch ID support

### SECURITY

- + BSI certified solution ("Zulassung" for iOS; "Allgemeine Freigabeempfehlung" for Android)
- + Developed based on German data protection guidelines
- + Smartcard integration with support for various smartcard readers
- + Strict separation of personal and classified data via SecurePIM's Container technology
- + State-of-the-art encryption for data at rest and in transit
- + Secure communication to local network resources via SecurePIM Gateway
- + Full S/MIME support

## All secure in one app.

### Smartcard Integration

For the highest security requirements, SecurePIM Government SDS has integrated smartcard support for secure authentication. All asymmetric encryption operations are based on private keys stored exclusively on the smartcard. Currently SecurePIM Government SDS supports various smartcard readers, including AirID® by Unicept and Tactivo™ by Precise™ Biometrics.

### Separation of Personal and Classified Data

Implemented as a Container solution, SecurePIM Government SDS provides controlled access to classified data by strictly separating it from all other content on the mobile device. All SPIM data is encrypted, and access is protected with a smartcard, preventing other apps or unauthorized users from accessing any classified information.

### Built-in Secure Email

SecurePIM Government SDS encrypts all data, both at rest and in transit. Employees can send and receive S/MIME encrypted emails without hassle and sender verification is provided with a unique S/MIME signature.

### Encrypted Voice Calls

SecurePIM Government SDS also offers end-to-end encryption for voice calls as an optional feature. Secure Voice supports low bandwidth over GPRS, EDGE, 3G, WiFi and satellite, allowing calls to be transmitted reliably and in a high voice quality. A high degree of security is achieved without pre-shared keys, plus two parallel encryption algorithms provides the highest level of security. Secure Voice is easy-to-use as calls are just a single click from the contact list.

The SecureVoice functionality integrates seamlessly with the other modules of the SecurePIM App. Please note that SecureVoice is only available for German government organizations.

#### Virtual Solution AG

Blutenburgstraße 18 | 80636 Munich | T +49 89 30 90 57-0  
kontakt@virtual-solution.com | www.virtual-solution.com

### COMPATIBILITY

- + iOS (version 11 or higher) and certified Android (version 7.0 or higher)
- + Supports email servers using ActiveSync
- + Access to files using WebDAV
- + User account synchronization via LDAP

### COMPONENTS OF THE SYSTEM SOLUTION

- + iOS or Android mobile devices
- + Smartcard (support for TCOS 3.0 Signature Card Version 2.0)
- + Smartcard reader
- + Any Mobile Device Management (MDM)
- + SecurePIM App
- + Virtual Solution Server Components: SecurePIM Gateway, SecurePIM Mobile Application Management Portal (MAM), SERA security framework

### SECUREPIM APP MODULES

- + Email
- + Contacts
- + Calendar
- + Notes
- + Tasks
- + Documents (edit and save files securely)
- + Browser (secure access to intranet and web)
- + Secure Camera
- + Secure Voice
- + Secure Messenger (in certification process)
