

The Trust Product Family

TrustDok

Secure, ultra-mobile document editing
for government authorities

The Trust Product Family

indigo (iOS Native Devices in Government Operation) is a solution approved by the German Federal Office for Information Security (BSI) specifically for government authorities to handle data classified as VS-NfD on iPhones and iPads. It includes basic communication and collaboration functions such as email, contacts, and calendars.

Materna Virtual Solution provides comprehensive expertise to extend these basic functions. We specialize in highly secure, ultra-mobile communication for government authorities, with particular expertise in approved iOS applications. We are familiar with the framework conditions, guidelines, and requirements for developing indigo apps and extend indigo with useful applications for secure, ultra-mobile working. TrustDok was therefore the first indigo application validated by the German Federal Office for Information Security (BSI).

What is TrustDok?

With TrustDok, users can edit, store, and send confidential Office documents and data classified as VS-NfD - at any time and with a high level of security. All official information is kept strictly separate from private data and stored within the protected and managed indigo environment.

TrustDok provides genuine mobile workplace convenience. Through seamless integration with other indigo apps such as WorkSPACE, as well as the native iOS Mail and Calendar apps, users can work flexibly and securely from anywhere.

Thanks to full support for the iOS Files app, other indigo apps can access files created in TrustDok. Likewise, TrustDok can access documents from other apps – ideal for a seamless, end-to-end workflow.

Using TrustDok becomes even more convenient when it is set as the default app for opening supported file types. This makes the secure handling of sensitive documents a natural part of mobile working.

Features

- + Open and edit documents from emails and calendar entries, other indigo apps, and the iOS Files app
- + Create new documents
- + Add comments to common document types such as PDF, Word, and PowerPoint
- + Save documents within the managed environment
- + Securely share documents from TrustDok with other indigo apps
- + Manage files using folder, search, and sorting functions
- + Stage Manager support

Benefits

- + Extends the basic functions of the indigo environment
- + Enables users to open, edit, and create VS-NfD documents while on the move
- + Provides user-friendly handling and seamless collaboration with other apps

Editable Office Documents

- + Word
- + Excel
- + Power Point
- + Text
